

D2

THREAT INTELLIGENCE CORRELATION & ALERT PRIORITISATION ASSISTANT

From alert overload → correlated threats → commander-ready intelligence

VRAJ KORINGA • CE • DEPSTAR

MISSION

Turn fragmented threat data into clear, prioritised decisions.

VISION

Help defenders see the real threat before it becomes the real incident.

The analyst is drowning in signals.

Modern defence teams receive threat information from multiple sources and formats.

 SIEM

 SATELLITE

 CYBER SENSORS

 INTEL REPORTS

ALERT OVERLOAD

Thousands of alerts + different formats + limited human attention

- Genuine threats can be missed.
- False positives consume critical resources.
- Commanders need structured BLUF assessments in minutes.

The mission: make threat data actionable.

D2 is designed around one operational question: what matters most right now?

MULTI-SOURCE

Ingest diverse threat feeds

CORRELATE

Connect related alerts

PRIORITISE

Separate signal from noise

BLUF

Brief commanders quickly

MISSION

Correlate fragmented intelligence and prioritise genuine threats so analysts can focus on what needs action.

VISION

A faster, clearer threat picture where commanders receive decision-ready intelligence before time is lost.

One pipeline. One prioritised threat picture.

The proposed assistant converts raw feeds into correlated, explainable intelligence.

From isolated alerts to an explainable priority.

Correlation is the core: multiple weak signals can form one stronger threat story.

What the commander sees.

A compact workflow: alert intake → prioritisation → decision-ready BLUF.

THREAT OPERATIONS / LIVE QUEUE

3 alerts correlated • 1 high priority

HIGH

Credential abuse + suspicious network activity

MEDIUM

Known indicator detected in endpoint telemetry

LOW

Isolated anomaly — insufficient evidence

BLUF

HIGH PRIORITY

Multiple correlated signals indicate a credible threat. Investigate immediately.

MITRE ATT&CK • TECHNIQUE LINKED

DEMO CUE

Show one alert entering the system → correlation → priority score → BLUF output.

Faster decisions. Less noise. Better focus.

D2 is built to support analysts — not replace judgement.

REDUCE NOISE

Correlate duplicate and related alerts.

FOCUS EFFORT

Push genuine threats to the top.

BRIEF FASTER

Generate structured BLUF summaries.

FUTURE SCOPE

Real-time streaming • confidence scoring • richer ATT&CK context • analyst feedback loop

THE END GOAL

Turn thousands of signals into the few decisions that matter.

THANK YOU
